

Grill & Accessory Cover

This cover is for use with your Fire Magic product. It is constructed of a durable material that will protect your appliance when not in use. Many covers are designed with double-stitched vents to provide ventilation.

To install a built-in cover, place the cover over your unit, with the Fire Magic logo facing forward. If the cover is equipped with clips, carefully secure them at the front-bottom edge of the unit. Reference Fig. 1-1 for an example.

To install a countertop cover, place the cover over your unit, with the Fire Magic logo facing forward/upward. If the corners of the cover are equipped with elastic cords, carefully pull each cord over the notches found on the corners of the unit.

To install a stand alone cover, place the cover over your unit with the Fire Magic logo facing forward. If the cover is equipped with Velcro strips, they may be used to secure the skirt portion of the cover.

To clean the cover, use mild hand soap with warm water and a sponge.

Built-in cover shown, design may vary

Fig. 1-1

It is recommended that you wash the cover only as needed.
To prevent mold and mildew: wipe down and dry your cover with a soft towel or cloth after cleaning or rainfall.
